1. *Phylogenetic relationships*—Phylogenetic relationships were determined using the parsimony method of Farris (1993) with the computer program PAUP (version 4.0; Farris and Neeland, 1999). The parsimony method was chosen because of the lack of a priori knowledge of the number of characters that were likely to be informative. The parsimony method was used with the following settings: heuristic search, 1000 random addition replicates, 1000000 iterations, and 1000000 iterations of tree-shrinking. The parsimony method was used with the following settings: heuristic search, 1000 random addition replicates, 1000000 iterations, and 1000000 iterations of tree-shrinking. The parsimony method was used with the following settings: heuristic search, 1000 random addition replicates, 1000000 iterations, and 1000000 iterations of tree-shrinking.
